[b]Ultrasound Pain Field Guns and Sonic Shock Wave Generators[/b]

Can discourage and intimidate intruders, drive out animal pests, and train dogs to stop barking.

These ultrasound pain field guns and generators can be tuned to target certain animals and unwanted human intruders. The effect does not cause injury but produces a debilitating highly discomforting feeling of nausea, disorientation and paranoia.

There are many home and personal alarms available, but none have a deterrent that can prevent or discourage an encounter quite like ultrasound. You will find on this page devices that can be tied in with alarm systems to provide a PAIN FIELD that can produce very uncomfortable to painful effects. These can range from debilitating and incapacitating, to enervating fear and threatening, to sickening nausea and nerve racking paranoia...all without physical contact! Effects can vary to an extent with number of units used, installation, distances, target sensitivity, and other variables.

A major part of this technology was developed in our labs for the Israeli military and now is used by other militaries (including the US and Israel) and peace-keepers as a deterrent to discourage and break up unruly crowd gatherings and potential riots. See our downloads for more available data and other more effective deterrents.

PPF/PCC Instructions

ATTENTION: READ INSTRUCTIONS BEFORE USING UNIT.

APPLICATION

Your Phasor Pain field System is capable of operating in two modes. Mode 1 is at a frequency that is known to produce paranoia, nausea, disorientation and other physiological effects. Mode 2 allows using the system as an audible alarm to frighten off intruders or warn the user of an intrusion. Both modes may be used in combination and are easily controlled from the front panel by the user.

A WORD OF CAUTION:

Ultrasonics are a gray area in many respects when application involves the control of animals or even as a human deterrent to unauthorized intrusion. It is always best to consult with local municipal and state laws before using this device to protect home or property. REMEMBER MANY STATE LAWS LEAN MORE TOWARDS THE "RIGHTS OF THE CRIMINAL" RATHER THAN THE VICTIM

ATTENTION!

Your sonic acoustical generator is intended for use as a security or property protection device. Please be aware that certain states do not allow the use of any device that may discourage or impede any criminal activity, claiming such use is a violation of the law breakers civil rights. Always check with the proper authorities before installing this device with the intent of discouraging illegal entry or protection of your personal home or property. We have been alerted that use in MASS, NYC, and WASH DC may require licensing restrictions in the future when used for security or property protection involving a possible violation of the law breakers rights!
